# VISVESVARAYA TECHNOLOGICAL UNIVERSITY

"JnanaSangama", Belgaum -590014, Karnataka.

# LAB REPORT on

# **Big Data Analytics (23CS6PCBDA)**

Submitted by

Rahul N Raju (1BM22CS215)

in partial fulfillment for the award of the degree of BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
March-2025 to June-2025

# B. M. S. College of Engineering,

**Bull Temple Road, Bangalore 560019** 

(Affiliated To Visvesvaraya Technological University, Belgaum)

### **Department of Computer Science and Engineering**

#### **CERTIFICATE**

This is to certify that the Lab work entitled "Big Data Analytics (23CS6PCBDA)" carried out by Rahul N Raju (1BM22CS215), who is bonafide student of B. M. S. College of Engineering. It is in partial fulfillment for the award of Bachelor of Engineering in Computer Science and Engineering of the Visvesvaraya Technological University, Belgaum during the year 2025. The Lab report has been approved as it satisfies the academic requirements in respect of a Big Data Analytics - (23CS6PCBDA) work prescribed for the said degree.

**Prof. Pradeep Sadanand**Assistant Professor
Department of CSE
BMSCE, Bengaluru

**Dr. Kavitha Sooda**Professor and Head
Department of CSE
BMSCE, Bengaluru

# **Index Sheet**

SI. No.	Experiment Title	Page No.
1	MongoDB- CRUD Demonstration.	1 - 4
2	Perform the following DB operations using Cassandra.  a) Create a keyspace by name Employee b) Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary,Dept_Name c) Insert the values into the table in batch d) Update Employee name and Department of Emp-Id 121 e) Sort the details of Employee records based on salary f) Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee. g) Update the altered table to add project names. h) Create a TTL of 15 seconds to display the values of Employees.	5 - 6
3	Perform the following DB operations using Cassandra.  a) Create a keyspace by name Library b) Create a column family by name Library-Info with attributes Stud_Id Primary Key, Counter_value of type Counter, Stud_Name, Book-Name, Book-Id, Date_of_issue c) Insert the values into the table in batch d) Display the details of the table created and increase the value of the counter e) Write a query to show that a student with id 112 has taken a book "BDA" 2 times. f) Export the created column to a csv file g) Import a given csv dataset from local file system into Cassandra column family	7 - 8
4	Execution of HDFS Commands for interaction with Hadoop Environment. (Minimum 10 commands to be executed)	9 - 10
5	Implement Wordcount program on Hadoop framework	11 - 14
6	From the following link extract the weather data https://github.com/tomwhite/hadoop book/tree/master/input/ncdc/all Create a Map Reduce program to a) find average temperature for each year from NCDC data set. b) find the mean max temperature for every month.	15 - 23

7	For a given Text file, Create a Map Reduce program to sort the content in an alphabetic order listing only top 10 maximum occurrences of words.	24 - 29
8	Write a Scala program to print numbers from 1 to 100 using for loop.	30 - 32
9	Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark.	33 - 34
10	Write a simple streaming program in Spark to receive text data streams on a particular port, perform basic text cleaning (like white space removal, stop words removal, lemmatization, etc.), and print the cleaned text on the screen. (Open Ended Question).	35 - 38

# **Course Outcome**

CO <sub>1</sub>	Apply the concept of NoSQL, Hadoop or Spark for a given task	
CO <sub>2</sub>	Analyze big data analytics mechanisms that can be applied to	
	obtain solution for a given problem.	
CO <sub>3</sub>	Design and implement solutions using data analytics	
	mechanisms for a given problem.	

Github link - https://github.com/RahulCS215/BDA\_LAB

# **Experiment-1**

Q) MongoDB- CRUD Operations Demonstration (Practice and Self Study)

Code & Output:

1. Create a database "Student" with the following attributes Rollno, Name, Age, ContactNo, Email-Id, grade, hobby:

use Students;

2. Insert 5 appropriate values according to the below queries.

```
db.students.insertMany([

{ "Rollno": 10, "Name": "John", "Age": 20, "ContactNo": "1234567890", "Email-Id": "john@example.com", "grade": "A", "hobby": "Reading" },

{ "Rollno": 11, "Name": "Alice", "Age": 21, "ContactNo": "9876543210", "Email-Id": "alice@example.com", "grade": "B", "hobby": "Painting" },

{ "Rollno": 12, "Name": "Bob", "Age": 22, "ContactNo": "2345678901", "Email-Id": "bob@example.com", "grade": "C", "hobby": "Cooking" },

{ "Rollno": 13, "Name": "Eve", "Age": 23, "ContactNo": "3456789012", "Email-Id": "eve@example.com", "grade": "A" },

{ "Rollno": 14, "Name": "Charlie", "Age": 24, "ContactNo": "4567890123", "Email-Id": "charlie@example.com", "hobby": "Gardening" }
```

```
Atlas atlas-wanmtx-shard-0 [primary] Student> use Students
   switched to db Students
   Atlas atlas-wanmtx-shard-0 [primary] Students> show collections
   Atlas atlas-wanmtx-shard-0 [primary] Students> db.students.insertMany([
   ... { "Rollno": 10, "Name": "John", "Age": 20, "ContactNo": "1234567890", "Email-Id": "john@example.com", "grade": "A", "hobby": "Reading" },
... { "Rollno": 11, "Name": "Alice", "Age": 21, "ContactNo": "9876543210", "Email-Id": "alice@example.com", "grade": "B", "hobby": "Painting" },
   ... { "Rollno": 12, "Name": "Bob", "Age": 22, "ContactNo": "2345678901", "Email-Id": "bob@example.com", "grade": "C", "hobby": "Cooking" },
... { "Rollno": 13, "Name": "Eve", "Age": 23, "ContactNo": "3456789012", "Email-Id": "
   eve@example.com", "grade": "A"
    },
              { "Rollno": 14, "Name": "Charlie", "Age": 24, "ContactNo": "4567890123", "Email-Id
   ": "charlie@example.com", "hobby": "Gardening" }
      acknowledged: true,
      insertedIds: {
         '0': ObjectId("661ce9dc76a00ff8cc51dae1"),
         '1': ObjectId("661ce9dc76a00ff8cc51dae2"),
         '2': ObjectId("661ce9dc76a00ff8cc51dae3"),
         '3': ObjectId("661ce9dc76a00ff8cc51dae4"),
         '4': ObjectId("661ce9dc76a00ff8cc51dae5")
]) }
```

3. Write query to update Email-Id of a student with rollno 10.

4. Replace the student name from "Alice" to "Alicee" of rollno 11

db.students.updateOne(

5. Display Student Name and grade(Add if grade is not present)where the id column is 1.

```
db.students.find({}, { "Name": 1, "grade": { $ifNull: ["$grade", "Not available"] }, " id": 0 })
```

6. Update to add hobbies

7. Find documents where hobbies is set neither to Chess nor to Skating

db.students.find({ "hobby": { \$nin: ["Chess", "Skating"] } })

#### 8. Find documents whose name begins with A

db.students.find({ "Name": /^A/ })

```
Atlas atlas-wanmtx-shard-0 [primary] Students> db.students.find({ "Name": /^A/ })

[
    _id: ObjectId("661ce9dc76a00ff8cc51dae2"),
    Rollno: 11,
    Name: 'Alicee',
    Age: 21,
    ContactNo: '9876543210',
    'Email-Id': 'alice@example.com',
    grade: 'B',
    hobby: 'Painting'
}
]
```

## Experiment - 2

- Q) Perform the following DB operations using Cassandra
  - a) Create a keyspace by name **Employee**
  - b) Create a column family by name **Employee-Info** with attributes Emp\_Id Primary Key, Emp\_Name, Designation, Date of Joining, Salary, Dept Name
  - c) Insert the values into the table in batch
  - d) Update Employee name and Department of Emp-Id 121
  - e) Sort the details of Employee records based on salary
  - f) Alter the schema of the table **Employee\_Info** to add a column **Projects** which stores a **set of Projects** done by the corresponding Employee.
  - g) Update the altered table to add project names
  - h) Create a TTL of 15 seconds to display the values of Employees

#### Code & Output:

```
Interesting Decision 1 (127.0.6.1994) (California 127.0.6.1994) (Calif

# Experiment-3

- Q) Perform the following DB operations using Cassandra
  - a) Create a keyspace by name **Library**
  - b) Create a column family by name Library-Info with attributes

Stud\_Id Primary Key, Counter\_value of type Counter, Stud\_Name, Book-Name, Book-Id, Date\_of\_issue

- c) Insert the values into the table in batch
- d) Display the details of the table created and increase the value of the counter
- e) Write a query to show that a student with id 112 has taken a book "BDA" 2 times
- f) Export the created column to a CSV file
- g) Import a given CSV dataset from local file system into Cassandra column family

#### Code & Output:

# Experiment - 6

Q) From the following link extract the weather data <a href="https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all">https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all</a>

Create a Map Reduce program to

- a) find average temperature for each year from NCDC data set.
- b) find the mean max temperature for every month.

Code & Output:

a) Find average temperature for each year from NCDC data set

```

Q) Write a Scala program to print numbers from 1 to 100 using for loop.

# **Code:**

```
for (i <- 1 to 100) {
    println(i)
}</pre>
```

**Output:** 

```
version 4.0.0
Using Scala version 2.13.16 (OpenJDK 64-Bit
Type in expressions to have them evaluated.

# Experiment - 9

Q) Using RDD and FlatMap count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark.

#### Code:

```
val text = sc.textFile("file:///Users//Desktop/word.txt")
val words = text.flatMap( .split("\W+"))
val cleanedWords = words.map( .toLowerCase).filter( .nonEmpty)
val wordPairs = cleanedWords.map(( , 1))
val wordCounts = wordPairs.reduceByKey( + )
val frequentWords = wordCounts.filter( .2 > 4)
val wordsOnly = frequentWords.map( . 1)
wordsOnly.collect().foreach(println)
Input Word.txt file:
Apple, Apple, apple, APPLE, apple. This is an apple.
Banana orange grape spark.
Data data data data.
Hello world. Hello Spark. Hello Scala. Hello again. Hello.
Another word, another line.
```

# **Output:**

```
data
apple
hello
val text: org.apache.spark.rdd.RDD[String]
```

## **Experiment 10:**

Q)Write a simple streaming program in Spark to receive text data streams on a particular port, perform basic text cleaning (like white space removal, stop words removal, lemmatization, etc.), and print the cleaned text on the screen. (Open Ended Question)

#### **Code:**

```
import org.apache.spark.SparkConf
import org.apache.spark.streaming.{Seconds, StreamingContext}
import org.apache.log4j.{Level, Logger}
Logger.getLogger("org").setLevel(Level.ERROR)
Logger.getLogger("akka").setLevel(Level.ERROR)
val ssc = new StreamingContext(sc, Seconds(1))
val lines = ssc.socketTextStream("localhost", 9999)
val stopWords = Set("a", "an", "the", "is", "be", "to", "and", "or", "for", "of", "in", "it")
val cleanedTextDStream = lines
 .flatMap( .split("\\W+"))
 .map( .toLowerCase)
 .filter( .nonEmpty)
 .filter(word => !stopWords.contains(word))
 .map(word => word)
cleanedTextDStream.print()
ssc.start()
```

ssc.awaitTermination()

## **Output:**

Hello Spark Streaming! This is a test.

```
Time: 1748196242000 ms
------
hello
spark
streaming
this
test
```

Running code and writing programs. This is an awesome example.
